

Robinson R44 Raven II

Based at Albert Whitted Airport (KSPG)

The **Robinson R44 Raven II** provides excellent reliability, responsive handling, and altitude performance, making the R44 ideal for private, business, and utility applications. A powder-coated steel-tube structure gives the R44 a rigid yet lightweight airframe, while the aerodynamic fuselage optimizes air speed and fuel economy. This helicopter comfortably seats three passengers and views are unobstructed due to the R44's open cabin design. A heavy-duty muffler and other features decrease flyover noise, resulting in a community-friendly helicopter.
